

WHAT IS CLAIMED IS

1. An improved electronic device, which comprising of:
 - a case having a containing room;
 - a container independent from the electronic device for reserving electronic device and embedded in the containing room of the case for electrical engagement;
 - an electrical structure being an interface between the case and the container for supplying power.
2. The improved electronic device as claimed in claim 1, the case has a slot.
3. The improved electronic device as claimed in claim 2, the container allocated a fastener, when embedded in the containing room, the fastener fastened onto the embedded slot to secure the container.
4. The improved electronic device as claimed in claim 1, the container allocated at least one power-supply component.
5. The improved electronic device as claimed in claim 4, the power-supply component is a battery.
6. The improved electronic device as claimed in claim 1, the container allocated at least one power-consumption component.
7. The improved electronic device as claimed in claim 6, the power-consumption component is a fluorescent lamp.
8. The improved electronic device as claimed in claim 1, the electronic device allocated at least one lighting component.
9. The improved electronic device as claimed in claim 8, the lighting component is a electro-luminescent.
10. The improved electronic device as claimed in claim 8, the lighting component is a LED.
11. An improved electronic device, which comprising of:
 - a shielding;
 - a container has a containing room for reserving electrical device and incorporate with the

shielding;

an electrical structure allocated in the containing room of the container for supplying power.

12. The improved electronic device as claimed in claim 11, the electronic device container allocated at least one power-supply component.
13. The improved electronic device as claimed in claim 12, the power-supply component is a battery.
14. The improved electronic device as claimed in claim 11, the electronic device allocated at least one lighting component.
15. The improved electronic device as claimed in claim 14, the lighting component is a electro-luminescent.
16. The improved electronic device as claimed in claim 14, the lighting component is a LED.
17. The improved electronic device as claimed in claim 11, the shielding and the container incorporated by fasten means.
18. The improved electronic device as claimed in claim 11, the shielding and the container incorporated by screw means.
